PurGen: The Next Attempt at Ocean Dumping

An experimental coal/chemical plant and carbon dioxide storage project, called PurGen, has been proposed for **Linden, New Jersey**.

The PurGen plant would process coal for energy in Linden and then send a trillion pounds of pressurized, liquid carbon dioxide waste via a 100-mile pipeline through the **Raritan Bay** and out into the seabed off **Atlantic City**.

Join environmental groups for a presentation on PurGen and ocean dumping of CO².

Speakers include:

Grace Sica, *NJ Sierra Club*

Laura Coll, *NJ Sierra Club*

Heather Saffert, *Clean Ocean Action*

Monday, May 24, 2010 at 7:00 p.m.
